DGE Newsletter, February 2007

Field & Berry Labs

Feb. 7: Jennifer Junk, a post doc in Vitousek's lab, described her recent work with isoprene emission from plants as influenced by nitrogen fertilization and stress. Then she went on to discuss a proposal with Asner to study the mechanisms of how some plants may invade the habitats of natives in Hawaii. Questions to investigate may be resource efficiency, phenotypic plasticity and herbivory pressures.

Feb. 14: Our Seminar speaker, Diane Pataki fielded far-reaching questions from her background to current research activities. She had worked with former Carnegie Fellow, Jim Ehleringer at the Univ. Utah, and Salt Lake City is now one of her research study sites.

Feb. 21: Katie Amatangelo sought feedback about writing up her work in Hawaii with Peter Vitousek on Interacting controls of nutrient availability and plant phylogeny on foliar nutrient content. She has been measuring N, P, & cations in groups of ferns compared to angiosperms in the same habitat.

Feb. 28: Seminar speaker, Jim Kirchner joined us for a far ranging discussion of ecosystems. The UC Reserves which he manages encompass thousands of acres and many different types of landscapes and climates. We also discussed the NEON project — National Ecological Observatory Network, and how the work Ecology has different meanings to different scientists.

First External Review of Global Ecology

Six distinguished scientists and two Carnegie Trustees visited the Department on Feb. 19-20 to carry out this 5-yr scheduled evaluation. They were scientists: Dr. William H Schlesinger, Duke Univ.; Mr. John Botts, Botts & Co. Ltd, London; Dr. Michael Brin, Univ. Maryland; Dr. Inez Fung, Univ. Calif. Berkeley; Dr. Pamela Matson, Stanford Univ. & Dr. Barry Osmond, Australian Nat'l Univ. and Trustees: Dr. Richard A. Meserve and Mr. Michael Gellert.

Feb. 19: The Visiting Committee mingled with the students, post docs, & faculty over a buffet lunch.

Seminars

Feb. 14: Dr. Diane Pataki, Dept. Ecology & Evolutionary Biology, Univ. Calif., Irvine spoke on "Improving fossil fuel emissions scenarios with studies of coupled human-environment systems."

Feb. 28: Dr. Jim Kirchner, Dept. Earth & Planetary Science, Univ. Calif. Berkeley spoke on Exploring forest ecosystems by studying their streams. Jim is in charge of six of the areas in the UC Natural Reserves System (five in the Sierra Nevada).

Asner Lab

Most of the Asner crew are working in Hawaii to test the the new Carnegie Airborne Observatory (CAO) program, which brings together new remote sensing technologies on an airplane to study ecosystems at the regional level. (See November 06 Archive)

Ty Kennedy-Bowdoin has been added to the technical staff for operations, processing, & planning the CAO program.

Feb. 7: Tea Time returned to DGE. We hope it will continue on Wednesdays at 10:30 AM as a time to get better acquainted and share news on an informal basis. All are welcome.

Outreach

Chris Field and Joe Berry, with Adam Wolf assisting, are teaching a Stanford Graduate Course titled Biosphere/Atmosphere Interactions during the current Winter Quarter.
