Index

Abiotic
  degradability, 344
  degradation, 108, 351
    in aquatic systems, 122–130
Absorbents, for CO₂-trapping, 156
Absorption coefficient, 96
Abstraction
  of hydrogen, by OH-radicals, 60
    reactions, 58
      rate constants, 61
Accumulation, 2, 151, 235, 335, 337, 344
  balance of rates of uptake and
    clearance, 233
  of chemicals from sediment, laboratory
    test, 151
  of chemicals from water
    formula, 235
      steady state plateau, 235, 236
    potential, 344
Acetaldehyde
  from propene, 70
  photolysis of, 73
  reaction with OH, 73
Acetyl peroxy radical from acetaldehyde, 73

Achromobacter, 221

Acid
  nitric, 16
  precipitation, and soil pH, 173
    rain, 16
  sulfuric, 16

Acinetobacter, 221

Actinic irradiance, 35

Actinometer, 127

Actinomycetes, and biodegradation in
  dry soils, 220

Activated sludge, 225
  degradation in, 185
    semi-continuous test, 227

Activation, indirect, 107

Active oxygen species, 99

Active sites, on earth surface,
  75

Adaptation
  bacterial, 216
    by enzyme induction, 222
      process, temperature dependence of,
        220
  Adaptive enzymes, 215

Additional reactions, 61, 63

Addition/substitution rules, 340

Adiposity, and clearance of chlordane
  from fish, 247

Adsorbing surfaces, effects on
  biodegradation, 147

Adsorption
  coefficient, 290
  constant, 290
    composite, or sediment, 141
  desorption, tests, 289
  isotherms, 94, 311
    of mercury, influence of Cl-ion
      concentration, 142
  of organic substances on the cell
    surface, 217
  of pesticides to dry soil, 175
    redox interaction, laboratory test of,
      149

Aeration profile, of sediment, 144

Aerobacter, 221

Aerobic
  degradation to CO₂, 217
  microorganisms, in sediment, 144

Aerodynamic method, 315

Aerosil, 94, 200

Aerosol
  precursor, 68
  surfaces, 5

Aerosols, 32, 85, 94, 353
  collision efficiency, 32
  collision frequency, 32
  interaction with gaseous compounds,
    46
Aerrosols (cont)
  interaction with radical cycles, 34
  photochemical formation, 46
  primary nuclei, 32
  reaction efficiency, 32
  size distribution, 32
  surface area, 32
Agglomeration, biological, by diatoms, 139
Agricultural chemicals, 336
Agrochemical, usage of soil, 173
Agro-ecosystem, 173, 313, 322
  chamber, 313
Air pollutants
  concentration of, 16
  degradation of, 16
  exposure to, 16
  residence time of, 16
Air–water interface, 296
Aitgen particlers, 32
Albedo, 35
Alcohols, 65
  degradation mechanisms of, 73
Aldehydes, 65, 69, 73
  from photodegradation of organics, 73
  photodissociation of, 73
  photolysis of, 73
  reaction with OH, 73
Aldrin, metabolism of, 197, 198
Alkanes, 65, 69
  in atmosphere, 24
Alkenes, in atmosphere, 24
Alkox radical, 69, 70, 72
Alkyl nitrite, photolysis system, 65
Allylic hydrogens, 69
American woodcock, fed with
  heptachlor-exposed worms, 273, 274
Amines, 66
  degradation mechanisms of, 73
Amino acids, in marine suspended
  particulates, 140
Aminoparathion, dealkylation,
  involvement of hydrogen sulphide,
  146, 157
Amino-triazinones, deamination,
  quantum yield, 90–92
Amphipod, 143
Anaerobic
  degradation to methane, CO₂ and
  water, 217
  periods, in lake sediments, 144
  reaction products, measurements of, 144

Anaerobiosis, 215
Anilines, oxidation to azobenzenes,
  198
Animals, and chemicals in soil, 177
Animal waste, and soil, 174
Anthracene, diffuse reflection on silica
  gel, 96
Anthropogenic material, 335
Aquatic
  ecosystems, 5
  food chain, in model ecosystem, 131
  systems, 120
  abiotic degradation in, 122–130
Aromatic
  amines, oxidation by peroxy radicals,
  129
  chlorinated hydrocarbons,
    dechlorination of, 92, 93
  hydrocarbons, distribution in aquatic
    system, field test, 159
  OH–O₂ adducts, bicyclic, 72
  oxidation systems, 72
  reaction with PH radical, 84
  thiol derivatives, oxidation by peroxy
    radicals, 129
Artificial
  ecosystem, 131
  light sources, for photodegradation
    tests, 127
Asbestos, lung cancer, 15
Assimilation, of pollutants, 271, 282
ASTM method, 113
Atmosphere
  as source of soil contamination, 173
  background, composition of, 23
  breakdown, 108
  energy transport in, 20
  gradients in mixing ratios, 21
  latitudinal mixing in, 21
  longitudinal mixing in, 21
  non-methane hydrocarbons in, 24
  radical producing compounds in, 25
  structure of, 20
  suspended particulates, 93
  vertical temperature distribution, 20,
    22
  vertical transport in, 21
Atmospheric
  aerosols, heterogeneous processes on,
    16
  breakdown, 8
  computer models, 64
  contamination, 307
  by plants, 320
Biodegradability (cont)
of non-ionic ethoxylated surfactants, 224
on anionic surfactants, 224
on cationic surfactants, 225
Porous Pot, 225
Wickbold method, 225
Biodegradation, 4
and chemical structure, 223
causes and mechanisms, 214–218
inhibition of
by bacteriostatic mineral concentrations, 219
by intermediary metabolites, 219
by other substrates, 219
in model ecosystems, 131
in water, 8
laboratory tests, 131
maximum rate, 219
of chemicals, in sediments, 144–148
of lignin or cellulose, 220, 221
tests, 224–228
extrapolation to the environment, 229
Biological
cycles, of elements, 214
response, studies, 345
Biomagnification, 351
contribution to accumulation, 249
definition, 244
and the depuration constant, 249
of sediment-borne chemicals, in aquatic food chains, 154
Biomass
adsorption of pollutants in sewage treatment, 222
increase by mineralization, 195
microbial, 216
Biometer flasks, for CO₂-trapping, 156
Biosynthesis, of persistent products, 196
Biotic
degradation, 351
and adsorption tests, 291
systems, 338
transformation, 351, 355
Biotransformation, 3
in vitro studies, 201, 202
of chemicals in anaerobic sediments, 145
of chemicals in plant–soil systems, laboratory test method, 203, 207
predictability from structural characteristics, 197, 198
total, test methods, 198
vs. mineralization test methods, 199, 200, 204
Bipyridylium herbicides, ion-exchange adsorption in soil, 176
BOD test, 226
Bond angle, 94
Bond length, 94
Borosilicate glass, filter, 109, 127
Bound mineralization products, 207 residues, in soil, bioavailability of, 181
Boundary conditions, 108 layers
air/water, 121
planetary, 24
Boxes, for outdoor plant studies, 318–320
Breakdown, atmospheric, 108
Brevibacterium, 221

Cadmium, 336
in earthworms, 268
uptake through sediment ingestion, 143
Calomel electrode, 146
Cancerogenicity, 345
Carassius auratus, 249
Carbonaceous substrate, bacteriostatic effects of, selection of resistant populations, 222
Carbon dioxide
as mineralization product, 195, 199
atmospheric content, 16
determination as end product of biodegradation, laboratory tests, 152, 155, 156, 224
effect on climate, 16
in atmosphere, 24
mixing ratio, 25
lifetime in troposphere, 25
separation from volatile organics, 156, 199
Carbon monoxide
as photomineralization product, 101
in atmosphere, 24
formation of, 24
lifetime of, 24
Carbon Pool, natural, 195
INDEX

Carbon tetrachloride, 101
Carbonyl compound, 67
Carnivore, 258
Carrot, 317
Catalases, microbial, 215
Catalyst
  substrate interaction, 94
  surface activity, 95
Catalytically, active surface, 95
Catalytic effectiveness, of surfaces, 94
Catalytic effects, 99
CEC directive
  basic dossier, 224
  notification dossiers, 224
Cell
  culture, 201
  fractions, 201, 202
  surface, adsorption of organics on, 217
Cellulose, biodegradation of, 220, 221
Chain reactions, 126
Chamber effects, 69
C–H bonds, oxidation by peroxo radicals, 129
CH₂CO, from acetaldehyde, 73
Chemical reactivity, 287
Chemical residues, in soil, 307
Chemicals, transport, 3
Chemolithotrophic, organism, 215
Chemodynamics, 9
Chemoorganotrophic organisms, 215, 220
Chemotrophic organisms, 215
Chicken, accumulation of methyl mercury, 276
Chlordane
  clearance from *Moxostoma macrolepidotum*, 247
  metabolites *in vitro vs. in vivo*, 202
Chlordene derivatives
  cycloaddition, 86, 87
  full-cage isomers, 86, 87
Chlorinated
  aromatics, 65
  double bond, and metabolism, 197, 198
  hydrocarbons, 92, 336
  aromatic, 92
  bioconcentration factors in aquatic species, 258
  from water chlorination, 129, 130
  photomineralization of, 99
  residues, and lipid content, 238
UV spectra, in solution vs. adsorbed, 97, 98
  olefins, photomineralization of, 100
  phenols
    biodegradation of, 147
    effects of sorption on, 147
Chlorination
  degree of, and biotransformation, 198
  of water, 129, 130
Chlorine
  anthropogenic emissions, 16
  atoms, position of, and
  biotransformation, 198
  containing substances, 58
  and stratospheric ozones, 58
  induced photooxidation, 100
  molecular, in water, 130
  radicals
    from hypochlorous acid, 130
    role in photomineralization, 101, 102
  substitution
    and biochemical reactivity, 197
    and steric inhibition of
    biotransformation, 198
Chloroaniline
  (ortho), 93
  volatilization in soil, 294
Chlorobenzenes
  monosubstituted, 93, 96, 97
  photo-induced dechlorination of, 93
Chloroethane, 102
Chlorophenol (-ortho), 93, 97
Chlorophyll, in marine suspended particulates, 140
CH₂O₂, bimolecular reactions, 68
Chromatographic separation, of
  non-mineralized compound mixture, 199
Chromatography, and migration in soil, 294
*Chromobacterium*, 221
Chromophoric group, 97
Circulation cells,
  equatorial, 20
  time, of air across tropopause, 20
Citrobacter, 221
Clay
  minerals, and polar chemicals, 290
  sediment, particle size of, 138
  Cleavage, metabolic, of double bonds, 198
Cl₂O, from chlorine in alkaline solution, 130
Closed bottle test, 226
C:N:P ratio, optimal for microbial growth, 218
$\text{CO}_2$
analysers, infrared, 110
from photomineralization, 109, 110
release
tests of biodegradability in aquatic systems, 227
tests of biodegradability in soil, 228
Coagulation, 138
Codistillation, 310
Coleoptile, sections, for \textit{in vitro} studies, 201
Collander equation, 292
Co-metabolism
microbial, 216–219, 222, 225–227
of xenobiotics, 195
Comparative metabolism, 185
Compartmentalization, 338
Compartments, of the soil–plant system, 182
Complex formation, 132
Computation models, 286
Computer modelling, 69
Concentration factors, 271, 282
and size, 273, 282
in different trophic levels, 261
of metals in earthworms, 268
Condensed-phase, 83
Conduction channels, 316
Connectivity indices, molecular, 288
Constitutive enzymes, 215
Continuous films, on the sea surface, 140
Continuous input
of chemicals into soil, 177–179
steady-state concentration, 178
Conversion
coefficient, of substrate into biomass, 216
internal, 83
rates
biochemical, determination of, 200
predictability of, 203
reactions, in sediment, laboratory tests, 151, 154
Coprecipitation, of chemicals, with iron(III) oxides, 147
Correlation, structure-degradability, 85, 86
\textit{Corynebacterium}, 221
Co-solvents, in hydrolysis tests, 124
Cost limitations, 352

- Toluene, photo-oxidation of, 71
- Toxaphene
  - degradation in estuarine sediments, 145
  - volatilization loss, 322
- Toxicants, formed by biotransformation, 196
- Toxicological, investigation, 340
- Toxicology, of xenobiotics, 183
- Toxic substances, 336
- control laws, 338, 346
- Toxic substrates, and the microbiocenosis, 222
Trace elements, as microbial growth promoters, 218
Trace gases, in air, 23, 25
Transfer
of chemicals between soil, air and biota, 316–323
tests, 319–323
of chemicals between soil and air, 307–316
tests, 308, 309, 312–316
of chemicals between soil and water,
tests, 288, 289, 293–296
of chemicals between water and air,
tests, 298, 299, 302–307
Transformation, 286, 335, 344
abiotic, 2
biotic, 2
Transformation reactions, microbial, 215
Transition
dipole, 82
photophysical, 84
radiation-free, 82, 83
Transitional moment, 82
Translocation, of chemicals to shoots, 316, 317
Transpiration stream, 317, 320
concentration factor, 317
Transport, 351
atmospheric, 4
chemicals, 3
global, 4
of chemicals adsorbed to soil particles, 140
within a hemisphere, 21
Transport models, 3
for chemicals in soil, 174, 175
Transport times, in the troposphere, 74
Trapping
of volatile organics and CO₂, as biotransformation/biodegradability test, 199, 200, 204
of volatilized organics, 303, 304, 312, 313, 322
Treatability tests, in model water treatment plants, 223
Trichloroethylene, volatilization from water, 305, 306
Trichlorofluoromethane, 101
Trichlorophenol degradation by bacteria, and colonizable surfaces, 147
humic acid complexes of, 147
Triplet energies, of naturally occurring sensitizers, 128
Triplet energy, 87
Triplet sensitizers, 87
Triplet state, 82, 128
Triplet state reactions, blocked by oxygen, 99
Tris-2,3-dibromo-propylphosphate, 250
Trophic indices, 188
Trophic levels, in food chains, 258, 282
Tropopause mean, 22
polar, 22
temperature inversion, 20
tropical, 22
Troposphere chemistry of, 75
composition of, 21
fate of organics in, 81
light, 94, 97
reactive species in, 81
transport times in, 75
Tropospheric degradation, by OH radicals, 69
lifetimes, 74
residence times, 102
substances, 65
Tubifex, 143
Turbulence, 301
and microbial degradation, 218
Two-film model, 296, 310
Ultimate biodegradation, 218
tests, 224
Undisturbed soil cores, 295
Unextractable residue, of chemicals in soil, bioavailability of, 181
United Nations, International Programme of Chemical Safety, 348
Universal Soil Loss Equation, US Department of Agriculture/EPA, 176
Uptake of chemicals, by water from air, 304
of pollutants, 233
Uptake rate, correlation with weight, 233
UV absorption, 132
in adsorbed phase, 95
UV light pyrex-filtered, 101
short-wave, 101
UV-radiation, solar, 109
UV spectra
in solution vs. adsorbed phase
of DDE, 98
of DDT, 98
of hexachlorobenzene, 98
of o-dichlorobenzene, 97
of o-chlorophenol, 97
of pentachlorobenzene, 98
of pentachlorophenol, 98
of photodieldrin, 98
of tetrachlorobiphenyl, 98
of substituted benzenes, 92
UV spectrophotometry, 110
UV spectrum, in water, 125
Valence delta values, 293
